

Encoder Adapter FIT0324

Contents

- [1 Introduction](#)
- [2 Specification](#)
- [3 Encoder Diagram](#)
- [4 Encoder Sample Code](#)

Introduction

This adapter is especially designed for DFRobot 12V DC Motors. This adapter comprises an external pull-up resistor, which raises the output voltage when the transistor is turned off. This board has two build-in pull-up resistors.

Specification

- Compatible with open collector output encoder
- Size:31x24mm
- Hall Sensor Voltage : 5v

Encoder Diagram

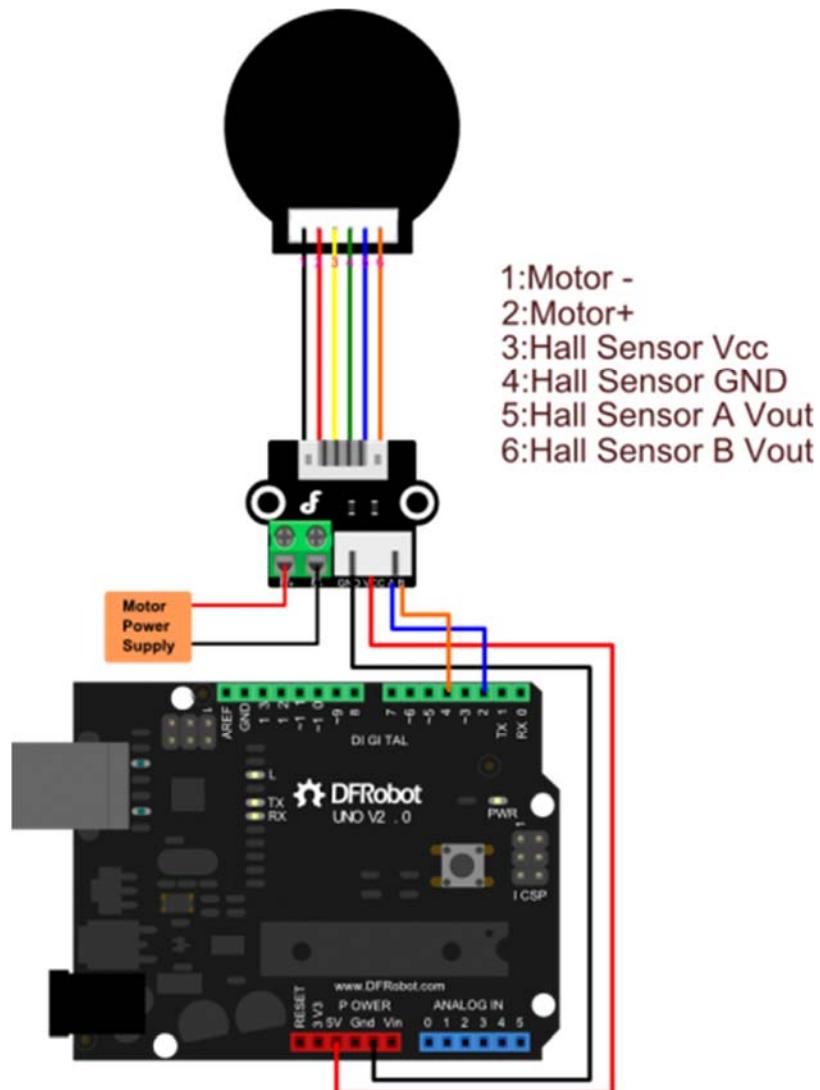

Diagram for using encoder with Encoder Adapter

Encoder Sample Code

```
/*
Pay attention to the interrupt pin,please check which microcontroller you use
.

http://arduino.cc/en/Reference/AttachInterrupt
*/
//The sample code for driving one way motor encoder
```

```
const byte encoder0pinA = 2;//A pin -> the interrupt pin 2
const byte encoder0pinB = 4;//B pin -> the digital pin 4
byte encoder0PinALast;
int duration;//the number of the pulses
boolean Direction;//the rotation direction

void setup()
{
    Serial.begin(57600);//Initialize the serial port
    EncoderInit();//Initialize the module
}

void loop()
{
    Serial.print("Pulse:");
    Serial.println(duration);
    duration = 0;
    delay(100);
}

void EncoderInit()
{
    Direction = true;//default -> Forward
    pinMode(encoder0pinB, INPUT);
    attachInterrupt(0, wheelSpeed, CHANGE);//int.0
}

void wheelSpeed()
{
    int Lstate = digitalRead(encoder0pinA);
    if((encoder0PinALast == LOW) && Lstate==HIGH)
    {
        int val = digitalRead(encoder0pinB);
```

```
if(val == LOW && Direction)
{
    Direction = false; //Reverse
}
else if(val == HIGH && !Direction)
{
    Direction = true; //Forward
}
encoder0PinALast = Lstate;

if(!Direction) duration++;
else duration--;
}
```
