

600V Cascode GaN FET in PQFN88 (source tab)

Description

The TPH3206LS 600V, 150mΩ gallium nitride (GaN) FET is a normally-off device. Transphorm GaN FETs offer better efficiency through lower gate charge, faster switching speeds, and smaller reverse recovery charge, delivering significant advantages over traditional silicon (Si) devices.

Transphorm is a leading-edge wide band gap supplier with world-class innovation and a portfolio of fully-qualified GaN transistors that enables increased performance and reduced overall system size and cost.

Ordering Information

Part Number*	Package	Package Configuration
TPH3206LS	8 x 8mm PQFN	Common Source

* Add "-TR" suffix for tape and reel

Features

- Easy to drive—compatible with standard gate drivers
- Low conduction and switching losses
- Low Q_{rr} of 54nC—no free-wheeling diode required
- JEDEC-qualified GaN technology
- RoHS compliant and Halogen-free

Benefits

- Increased efficiency through fast switching
- Increased power density
- Reduced system size and weight
- Enables more efficient topologies—easy to implement bridgeless totem-pole designs
- Lower BOM cost

Applications

- Renewable energy
- Industrial
- Automotive
- Telecom and datacom
- Servo motors

Key Specifications	
V_{DS} (V) min	600
V_{TDS} (V) max	750
$R_{DS(on)}$ (mΩ) max*	180
Q_{rr} (nC) typ	54
Q_g (nC) typ	6

* Includes dynamic $R_{(on)}$

Design Considerations

The fast switching of GaN devices reduces current-voltage cross-over losses and enables high frequency operation while simultaneously achieving high efficiency. However, taking full advantage of the fast switching characteristics of GaN switches requires adherence to specific PCB layout guidelines and probing techniques.

Before evaluating Transphorm GaN devices, see application note [Printed Circuit Board Layout and Probing for GaN Power Switches](#). The table below provides some practical rules that should be followed during the evaluation.

When Evaluating Transphorm GaN Devices:

DO	DO NOT
Minimize circuit inductance by keeping traces short, both in the drive and power loop	Twist the pins of TO-220 or TO-247 to accommodate GDS board layout
Minimize lead length of TO-220 and TO-247 package when mounting to the PCB	Use long traces in drive circuit, long lead length of the devices
Use shortest sense loop for probing; attach the probe and its ground connection directly to the test points	Use differential mode probe or probe ground clip with long wire
See AN0003 : Printed Circuit Board Layout and Probing
